

Admin keele muutmine

Üheks võimaluseks oleks muuta Default Config seadistust.

Selleks tuleks minna **System -> Configuration** (Süsteem -> Seaded).

Seejärel tuleks leida üles vasakult menüüst General (Üldine).

The image shows two side-by-side screenshots of the Multon CMS Admin Configuration interface. Both screenshots have a header with 'Current Configuration Scope' dropdown set to 'Default Config' and a 'Manage Stores' link. The left screenshot is for 'Seaded' and the right is for 'Configuration'. Both show a sidebar with 'DS EXTENSIONS' and 'Manage Sub CMS page Settings' buttons. Under 'MULTON', both show 'Info' and 'GENERAL' sections. The 'GENERAL' section contains 'General', 'Web', 'Design', 'Currency Setup', 'Store Email Addresses', 'Contacts', 'Reports', and 'Content Management'. In the left screenshot's sidebar, the 'ÜLDINE' section is expanded, showing 'Üldine' (highlighted in yellow), 'Serveri seaded', 'Kujundus', 'Valuuta seadistamine', 'Kaupluse e-kirja aadress', 'Kontaktid', 'Raportid', and 'Content Management'. In the right screenshot's sidebar, the 'ÜLDINE' section is collapsed. The 'Üldine' item in the left sidebar is also highlighted in yellow.

Store Information

Muuta Locale vastavalt soovitud keelele ja salvestada.

Kuid seejärel tuleb kindlasti kontrollida, et Eesti ja Soome poodides oleks locale õige.
(Eesti ja Soome pood kasutavad Default Configi väärust sellepärast)

Tulekski valida nt Eesti ja seejärel uuesti vasakult menüüst General ning kontrollida, kas locale on õige.

Et tulemus rakenduks, tuleks logida administ välja ja uuesti sisse.
